# AR9000 Model FOR LOADER

Owing to our great success with the **AR9000** on trucks and to the growing adoption of wheel-mounted loaders for snow removal, **CÔTÉ** has, in recent years, adapted its famous harness to most available loader models. This means that you can now make your loader even more profitable.

The **AR9000** is simple to use and very versatile. Snow removal contracts are getting more and more diversified, and that is why leasing rolling equipment is getting more popular. The harness has been designed based on the standard harness. **AR9000** can be adapted for different types of female hooks, or simply truck-mounted, as originally designed. This arrangement makes it a logical and economical choice.
